📍 Bengaluru

## SUMMARY

I'm a developer passionate about building scalable web applications and exploring AI-driven automation. I work primarily with the FARM stack — FastAPI, React, and MongoDB — creating efficient backend systems and clean, responsive frontends. Currently, I'm expanding my skillset into building AI agents using LangGraph and LangChain frameworks, as well as designing automation workflows with n8n. My focus is on combining robust web development with modern AI tools to solve real-world problems more intelligently and efficiently. Open to opportunities where I can contribute as a backend engineer, full-stack developer, or AI automation intern — while learning and growing alongside experienced teams.
